AMBULATORY EXTENDED EEG & VIDEO EEG FACTS

GOAL

To improve the overall quality and performance of extended EEG's.

The frequency of seizures in the general population is quite high (1 in 10). The success of medical intervention for the treatment of seizures has been successful, but 35% of individuals experiencing seizures have failed to achieve seizure freedom. The ability to capture events or specific EEG findings consistent with their seizures during routine EEG's is often difficult.

Ambulatory Extended EEG and video EEG can overcome limitations of routine EEG by allowing for more recording time and actually record events.

The dramatic improvement in digital technology has vastly expanded the opportunity for outpatient recordings to assist physicians in treating intermittent episodes.

OUR SERVICES

- **Better Diagnostic Tool Than Routine EEG**
- **Cost Effective, validated disease confirmation**
- **24 hours to 1 week of data acquisition**
- **Flexible/portable technology**
- **MD office, local office or patient home hookups available**

ADVANTAGES OF OVERNIGHT AM- BULATORY EEG vs. SLEEP DEPRIVED EEG

- **Patients and families do not need to stay up at night**
- **Patients or family members do not need to take off of work due to being overly tired**
- **Physicians are able to get a “guaranteed” sleep result**
- **The ability to actually record events**
- **Overnight EEG's provide much more data and a better quality test result**
- **Pediatric Neurologist available for consults and interpretations**

PHYSICIAN DRIVEN

- **Expert training through CME for interpretations and oversight for MD's**
- **Quality assurance and reader reliability support**
- **Medical Director is a National Epilepsy and ambulatory expert boarded in Neurology**
- **Registered Technologists provide testing expertise**
- **Rapid results faxed to referring MD's office (4-5 business days), with original to follow**

COMMUNITY AND PATIENT FOCUSED

The time to use our services is when there is an unclear diagnosis , questions regarding the elimination of seizure medications or when patients prefer to be closer to home and to their own doctor when they have their evaluations.

Our goal is to provide the best, most convenient cost effective service to doctors , patients and their families in the communities where they live. Local access to our services rather than having to travel into major metropolitan areas or to an inpatient epilepsy center for evaluations. These inpatient admissions to epilepsy centers have proven to be a very costly and in many case, inconvenient, option for patients needing extended testing.

Our mission is to work with local Epilepsy Foundations, physicians and parents to bring these services closer to the patients that need them. By providing greater extended EEG access to patients and doctors, we can help achieve a more appropriate diagnosis and treatment plan for patients through our testing. This will help patients achieve a better quality of life.
